# Introduction

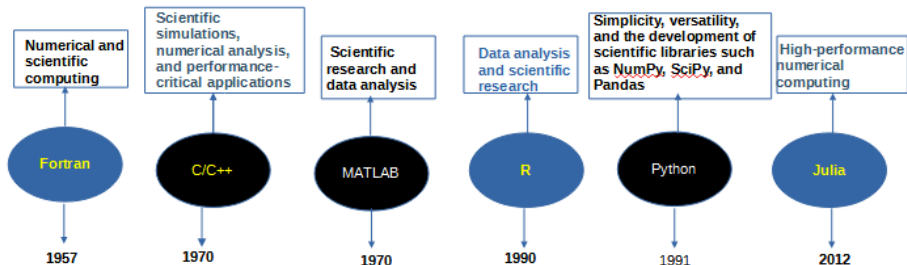

# Introduction<sup>1</sup>

<sup>1</sup>Landau et al. (2015)

# Types of most famous Programming Language <sup>2</sup>

<sup>2</sup><https://gvanrossum.github.io/>

# Python <sup>3</sup>

Founder of Python Language: **Guido van Rossum**

**History:** When he began implementing Python, Guido van Rossum was also reading the published scripts from “**Monty Python’s Flying Circus**” a BBC comedy series from the 1970s. Van Rossum thought he needed a name that was short, unique, and slightly mysterious, so he decided to call the language Python.

# Introduction : Python 3.11.3, released on 5 April 2023 <sup>4</sup>

<sup>4</sup><https://docs.python.org/release/3.11.3/>

# Applications <sup>5</sup>

<sup>5</sup>Garcia & Revano (2021)

# Statistics

- ➊ Slope (m) =  $\frac{dy}{dx}$
- ➋ Intercept (c) = y-mx
- ➌ Pearson's correlation coefficient  
$$(r) = \frac{\sum (x_i - \bar{x})(y_i - \bar{y})}{\sqrt{\sum (x_i - \bar{x})^2 \sum (y_i - \bar{y})^2}}$$
- ➍ p-values: to assess the strength of evidence against a null hypothesis.
- ➎  $Q_1, Q_2, Q_3$
- ➏ Minimum, Maximum and Range
- ➐ Mean, Median, Mode
- ➑ Standard deviation ( $\sigma$ ) =  $\sqrt{\frac{\sum (x_i - \bar{x})^2}{n}}$
- ➒ Standard error (SE) =  $\frac{\sigma}{\sqrt{n}}$
- ➓ Mean Absolute Deviation (MAD) =  $\frac{\sum |x_i - \mu|}{n}$
- ➑ Variance =  $\frac{1}{n} \sum_{i=1}^n (x_i - \bar{x})^2$
- ➒ CV =  $\left( \frac{\text{Standard Deviation}}{\text{Mean}} \right) \times 100\%$
- ➓ Skewness =  $\frac{\sum_{i=1}^n (x_i - \bar{x})^3}{n \cdot \sigma^3}$
- ➑ Kurtosis =  $\frac{\sum_{i=1}^n (x_i - \bar{x})^4}{n \cdot \sigma^4} - 3$

# Coding/plotting <sup>6</sup>

Symbol	Functionality
+	addition
-	subtraction
*	multiplication
/	division
%	modulo (yields remainder after division)
//	integer division (truncates toward zero)
**	exponentiation
abs(a)	absolute value of the number $a$ , $ a $
math.sin(x)	sine of $x$ radians (other trigonometric functions are also available)
math.factorial(n)	factorial of $n$ , $n!$
math.log(a,b)	$\log_b(a)$ (defaults to natural logarithm, if no base $b$ specified)
math.sqrt(x)	square root of $x$ , $\sqrt{x}$

<sup>6</sup>Ekmekeci et al. (2016)

## About

## Anaconda Distribution

# Free Download

Everything you need to get started in data science on your workstation.

- ✓ Free distribution install
- ✓ Thousands of the most fundamental DS, AI, and ML packages
- ✓ Manage packages and environments from desktop application
- ✓ Deploy across hardware and software platforms
